BRANDI

Compact and thoroughly robust, BRANDI is designed for architectural applications which require a wet-location luminaire that retains sophisticated style while resisting harsh elements.

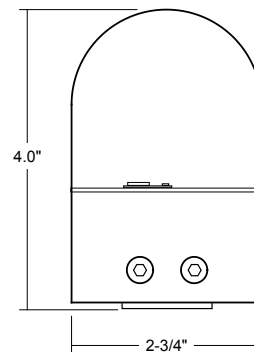

BRANDI's signature weather sealing feature withstand wet outdoor conditions while blending into the surrounding architecture with ease. The low-profile design of BRANDI simplifies tough installations in hard-to-reach areas and provides a strong light source to almost any outdoor location: above exits and entrances, along covered walkways or pergolas, and under structural eaves.

Two styles to choose from constructed of extruded aluminum housing, machined end caps, weather resistant gasketing, and a choice of extruded or polycarbonate lenses make BRANDI the perfect choice for demanding indoor and outdoor wet and damp applications.

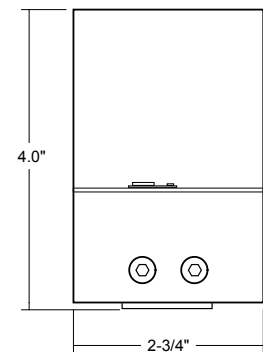

Dimensions

TD - Tear Drop Lens

TRI - Tri-Side Lens

Features and Benefits:

- Wet location listed for heavy duty outdoor or wet indoor applications
- LED light engines available as HLO (High Lumen Output), SLO (Standard Lumen Output) or CLO (Custom Lumen Output)
- Multiple LED color temperatures available
- Extruded acrylic lens featuring concealed weather-sealing gaskets
- Multiple mounting orientations offer ease of installation in difficult-to-reach outdoor locations
- Can be mounted as continuous-run, surface or pendant
- Heavy extruded aluminum, machined aluminum end caps
- ADA compliant 2 3/4" x 3 15/16" profile
- Dimming and emergency battery pack compatible
- Two architectural styles to choose from
- U.L. and c-U.L. listed for wet location
